

BMW iX3

Before driving

Unlock the vehicle

The BMW iX3 comes with a similar key to any regular vehicle and can be locked and unlocked using the buttons on the key.

Start the vehicle

Once inside, place the key in a safe spot and press the blue Start/Stop button to start the vehicle's engine.

Driving modes

To choose your driving mode (Drive or Reverse) use the gear stick in the centre console. You'll soon find the iX3 is fairly similar to most new cars and easy to navigate the options and basic drive features.

Vehicle infotainment and navigation

Vehicle infotainment and navigation can be controlled via the main screen in the middle of the dashboard. This operates like a smartphone where you'll also find other personalisation options, including climate control, Bluetooth and more. You can also use the control disk next to the centre console if you find it easier.

There is wireless phone charging and cable-free connection to either Apple CarPlay or Android Auto in the iX3.

Window and door controls can be found next to the vehicle's door handle.

While driving

Important driving information can be found on the dashboard display. This includes your speed, charge level and range.

Performance

The iX3 should give you around 400km of range depending how it's driven and what mode you're in.

In Sport Mode you'll find the vehicle more responsive and aggressive, while the vehicle will be quieter and more economical in Comfort or Eco Pro.

You'll notice that there is the option of 'B' Mode, which allows more rapid braking when off the throttle.

More information on your SIXT EV, instructional videos and available charging stations can be found using the QR code.

BMW iX3

Charging

Your iX3 is simple to charge. There are two ports for either a slow/fast charge (AC) or a rapid charge (DC). The charger you stop at will dictate which port to use and any accessories you may need are in the vehicle's boot. Follow the below steps:

1

Open the charge port by tapping on the charge port cover the same way you would a petrol cap.

2

Open the AC or DC cap depending on which charger you will be using.

3

Firmly plug the charge connector into the charge port and a white light will change to orange to initiate charging.

4

The light will then change to blue and continue to flash as it charges.

5

If you lock your car the charger cannot be removed and will stay charging until you unlock the car and remove the charger.

6

Charging is complete when a green light is displayed.

To unplug the charger:

1

Press the charger's clearly visible connector button.

2

The green light will change back to white.

3

When the light is white you can take out the charger and return it to its holder.

4

Make sure the vehicle's charge port cover is closed before resuming driving.

CHARGEFOX

Free charging with Chargefox

All SIXT Australia customers get free electric vehicle charging with Chargefox. Your vehicle will come with a Chargefox card or fob, which can only be used at Chargefox locations.

The card or fob is already linked to a SIXT Chargefox account, so all you need to do is follow the instructions on the charger, and tap/swipe at the location and plug in the charger. A full list of charge locations can be found on the Chargefox app which is free to download from the App Store or Google Play.
